SQL Cheat Sheet: Views, Stored Procedures and Transactions

Views

Topic	Syntax	Description	Example
Create View	`CREATE VIEW view_name AS SELECT column1, column2, ... FROM table_name WHERE condition;`	A `CREATE VIEW` is an alternative way of representing data that exists in one or more tables.	`CREATE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, SALARY FROM EMPLOYEES;`
Update a View	`CREATE OR REPLACE VIEW view_name AS SELECT column1, column2, ... FROM table_name WHERE condition;`	The `CREATE OR REPLACE` VIEW command updates a view.	`CREATE OR REPLACE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, JOB_TITLE, MIN_SALARY, MAX_SALARY FROM EMPLOYEES, JOBS WHERE EMPLOYEES.JOB_ID = JOBS.JOB_IDENT;`
Drop a View	`DROP VIEW view_name;`	Use the `DROP VIEW` statement to remove a view from the database.	`DROP VIEW EMPSALARY;`

Stored Procedures in IBM Db2 using SQL

Topic	Syntax	Description	Example

Stored Procedures	`--#SET TERMINATOR @ CREATE PROCEDURE PROCEDURE_NAME`
	
	`LANGUAGE`
	
	`BEGIN`
	
	`END`
	`@`
		A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.
		
		The default terminator for a stored procedure is semicolon(;). To set a different terminator we use `SET TERMINATOR` clause followed by the terminator such as '@'.
			`--#SET TERMINATOR @ CREATE PROCEDURE RETRIEVE_ALL`
			
			`LANGUAGE SQL READS SQL DATA`
			
			`DYNAMIC RESULT SETS 1 BEGIN`
			
			`DECLARE C1 CURSOR WITH RETURN FOR`
			
			`SELECT * FROM PETSALE;`
			
			`OPEN C1;`
			
			`END`
			`@`

Stored Procedures in MySQL using phpMyAdmin

Topic	Syntax	Description	Example

Stored Procedures	`DELIMITER //`
	
	`CREATE PROCEDURE PROCEDURE_NAME`
	
	`BEGIN`
	`END //`
	
	`DELIMITER ;`
		A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.
		
		The default terminator for a stored procedure is semicolon (;). To set a different terminator we use `DELIMITER` clause followed by the terminator such as $$ or //.
			`DELIMITER //`
			
			`CREATE PROCEDURE RETRIEVE_ALL()`
			
			`BEGIN`
			
			`SELECT * FROM PETSALE;`
			
			`END //`
			
			`DELIMITER ;`

Transactions with Db2

Topic	Syntax	Description	Example

Commit command	`COMMIT;`	A `COMMIT` command is used to persist the changes in the database.
		
		The default terminator for a COMMIT command is semicolon (;).
			`CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT);`
			
			`INSERT INTO employee( ID, Name, City, Salary, Age) VALUES( 1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riya chowdary' 82000, 29);`
			
			`SELECT *FROM employee;`
			`COMMIT;`

Rollback command	`ROLLBACK;`	A `ROLLBACK` command is used to rollback the transactions which are not saved in the database. The default terminator for a ROLLBACK command is	As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see rollback works. For db2, we have to disable auto-commit manually. Click the gear icon located on the right side of the SQL Assis window. Next, select the "On Success" drop-down and choose "commit after the last statement in the script" Remem save your changes!

semicolon
(;).
CREATE PROCEDURE ... (UI dialog)

INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38);

SELECT *FROM employee;
ROLLBACK;
SELECT *FROM employee;

Transactions with MySQL

Commit command	COMMIT;	A COMMIT command is used to persist the changes in the database. The default terminator for a COMMIT command is semicolon (;).	CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT); START TRANSACTION; INSERT INTO employee(ID, Name, City, Salary, Age) VALUES(1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riya chowdary', 'Bangalor', 82000, 29); SELECT *FROM employee; COMMIT; As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see how rollback works. For MySQL use the command "SET autocommit = 0;"
Rollback command	ROLLBACK;	A ROLLBACK command is used to rollback the transactions which are not saved in the database. The default terminator for a ROLLBACK command is semicolon (;).	INSERT INTO employee VALUES (3, 'Swetha Tiwari', 'Kanpur', 38000, 38); SELECT *FROM employee; ROLLBACK; SELECT *FROM employee;

Db2 Transactions using Stored Procedure

Commit command	–#SET TERMINATOR @
	
	CREATE PROCEDURE PROCEDURE_NAME
	
	BEGIN
	
	COMMIT;
	
	END
	@
		A COMMIT command is used to persist the changes in the database.
		
		The default terminator for a COMMIT command is semicolon (;).
			--#SET TERMINATOR @ CREATE PROCEDURE TRANSACTION_ROSE LANGUAGE SQL MODIFIES SQL DATA
			
			BEGIN
			
			DECLARE SQLCODE INTEGER DEFAULT 0;
			DECLARE retcode INTEGER DEFAULT 0;
			DECLARE CONTINUE HANDLER FOR SQLEXCEPTION SET retcode = SQLCODE;
			
			UPDATE BankAccounts
			SET Balance = Balance-200
			WHERE AccountName = 'Rose';
			
			UPDATE BankAccounts
			SET Balance = Balance-300
			WHERE AccountName = 'Rose';
			
			IF retcode < 0 THEN
			ROLLBACK WORK;
			
			ELSE
			COMMIT WORK;
			
			END IF;
			
			END
			@

Rollback command	--#SET TERMINATOR @ CREATE PROCEDURE PROCEDURE_NAME BEGIN	A ROLLBACK command is used to rollback the transactions which are not saved in the database.	--#SET TERMINATOR @ CREATE PROCEDURE TRANSACTION_ROSE LANGUAGE SQL MODIFIES SQL

```
ROLLBACK;

COMMIT;

END
@
```

The default terminator for a ROLLBACK command is semicolon (;).

```
DATA

BEGIN

DECLARE SQLCODE INTEGER DEFAULT 0;
DECLARE retcode INTEGER DEFAULT 0;
DECLARE CONTINUE HANDLER FOR SQLEXCEPTION
SET retcode = SQLCODE;

UPDATE BankAccounts
SET Balance = Balance-200
WHERE AccountName = 'Rose';

UPDATE BankAccounts
SET Balance = Balance-300
WHERE AccountName = 'Rose';

IF retcode < 0 THEN
ROLLBACK WORK;

ELSE
COMMIT WORK;

END IF;

END
@
```

MySQL Transactions using Stored Procedure

Commit command	```DELIMITER //

CREATE PROCEDURE PROCEDURE_NAME

BEGIN

COMMIT;

END //

DELIMITER ;``` | A COMMIT command is used to persist the changes in the database.

The default terminator for a COMMIT command is semicolon (;). |
| Rollback command | ```DELIMITER //

CREATE PROCEDURE PROCEDURE_NAME

BEGIN

ROLLBACK;

COMMIT;

END //

DELIMITER ;``` | A ROLLBACK command is used to rollback the transactions which are not saved in the database.

The default terminator for a ROLLBACK command is semicolon (;). |

```
DELIMITER //

CREATE PROCEDURE TRANSACTION_ROSE()

BEGIN

DECLARE EXIT HANDLER FOR SQLEXCEPTION
BEGIN
ROLLBACK;
RESIGNAL;
END;

START TRANSACTION;
UPDATE BankAccounts
SET Balance = Balance-200
WHERE AccountName = 'Rose';

UPDATE BankAccounts
SET Balance = Balance-300
WHERE AccountName = 'Rose';

COMMIT;

END //

DELIMITER ;
DELIMITER //

CREATE PROCEDURE TRANSACTION_ROSE()

BEGIN

DECLARE EXIT HANDLER FOR SQLEXCEPTION
BEGIN
ROLLBACK;
RESIGNAL;
END;

START TRANSACTION;
UPDATE BankAccounts
SET Balance = Balance-200
WHERE AccountName = 'Rose';

UPDATE BankAccounts
SET Balance = Balance-300
WHERE AccountName = 'Rose';

COMMIT;

END //

DELIMITER ;
```
